Art Unit: 2142

1. Claims 1-42 are pending.

Response to Arguments

2. Applicant's arguments with respect to claims 1-42 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-42 are rejected under 35 U.S.C. 102(e) as being anticipated by Aridor et al [Aridor, 6,618,737 B2].

3. As per claim 1, Aridor discloses A system, comprising:

a distributed store comprising a primary state of session data configured for access by a plurality of application servers [Aridor, master node, col 9 lines 25-30], wherein the session data comprises a plurality of attributes [Aridor, a scenario with value of threads, col 21 lines 1-33];

a first one of the application servers comprising a client state of the session data [Aridor, locally status, col 8 line 62-col col 9 line 36], wherein the application server is

Page 3

Art Unit: 2142

configured to provide access to the session data to processes executing within the application server;

wherein the system is configured to:

compare the client state to a benchmark of the client state to determine a subset of the attributes that have been modified in the client state [Aridor, a set of micro benchmark, col 10 lines 39-55]; and

synchronize the primary state (i.e.: master copy) with the client state according to the subset of the attributes [Aridor, master object, col 4 lines 47-65; synchronization mechanism, col 25 lines 35-67].

- 4. As per claim 2, Aridor discloses the application server is configured to provide access to the session data for one or more client sessions of the system [Aridor, supporting access to remote objects, col 3 lines 50-64].
- 5. As per claim 3, Aridor discloses the system is further configured to perform binary differencing of a binary representation of the client state and a binary representation of the benchmark of the client state to locate the modified attributes [Aridor, 4-byte words, col 12 lines 14-21].
- 6. As per claim 4, Aridor discloses the system is further configured to perform object graph differencing of an object graph representation of the client state and an object graph representation of the benchmark of the client state [Aridor, two objects with

Application/Control Number: 10/087,225

Page 4

Art Unit: 2142

dfiffernet run-time behavior, col 4 line 1].

- 7. As per claim 5, Aridor discloses the first application server is configured to track accesses of the attributes of the client state, wherein the system is configured to: compare the tracked accessed attributes to a benchmark of the attributes of the client state to determine a subset of the tracked accessed attributes that have been modified in the client state; and synchronize the primary state with the client state according to the subset of the tracked accessed attributes [Aridor, tracking, monitoring, col 25 lines 48-63].
- 8. As per claim 6, Aridor discloses the first application server is further configured to track only mutable attributes [Aridor, mutability, mutable, col 16 line 65-col 17 line 6].
- 9. As per claim 7, Aridor discloses the first application server is further configured to track only mutable accesses of the attributes of the client state, wherein mutable accesses comprise write accesses of any of the attributes of the client state [Aridor, mutability, mutable, col 16 line 65-col 17 line 6].
- 10. As per claim 8, Aridor discloses the system is further configured to perform binary differencing of a binary representation of the tracked accessed attributes and a binary representation of the benchmark of the attributes of the client state to locate the

Application/Control Number: 10/087,225

Art Unit: 2142

modified tracked accessed attributes [Aridor, 4-byte words, col 12 lines 14-21].

11. As per claim 9, Aridor discloses the system is further configured to perform object graph differencing of an object graph representation of the tracked accessed attributes and an object graph representation of the benchmark of the attributes of the client state to locate the modified tracked accessed attributes [Aridor, different instances, col 19 lines 40-et seq.].

Page 5

12. Claims 10-42 contain the similar limitations set forth in claims 1-9. Therefore claims 10-42 are rejected for the same rationale set forth in claims 1-9.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner *Thong Vu*, whose telephone number is (571)-272-3904. The examiner can normally be reached on Monday-Thursday from 6:00AM-3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, *Andrew Caldwell*, can be reached at (571) 272-3868. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval IPAIRI system. Status information for published applications may be obtained from either Private PMR or Public PMR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
